

Somebody had to do it.

Network. Hardware. Solution.
All from one company.

The security industry demanded an advanced security solution that works across any network.

Powered by Numerex's next-generation CellemetryXG network and DigiCell® AnyNET technology, Digital Uplink is the single solution for dedicated wireless security communications, with complete support for digital, legacy, and hybrid networks.

More flexibility. More options. More reach.

Somebody had to do it. Somebody did... Numerex.
