Bringing Bottom Line Benefits To Your Practice

> WebMD Radiology solutions are installed in some of the leading imaging centers in the nation, where they have helped increase efficiency, accelerate report turnaround, improve patient service and quality of care and increase reimbursement – all while improving the bottom line of the practice.

To ensure your solution performs as you expect, the exclusive WebMD Customer First Program offers a dedicated personal resource to assist you and your practice with any questions or concerns you may have about your WebMD radiology solution.

> WebMD Radiology is focused on the success of your practice.

If you would like additional information, or wish to speak with someone about your specific requirements, please visit us at www.webmdps.com or phone 877.WebMD.01.

About WebMD Practice Services

WebMD® Practice Services helps practices meet the challenges of healthcare with innovative solutions, including electronic health records, encounter documentation, document and image management, and wireless and Internet connectivity. These solutions are designed to streamline workflow through automation, allowing providers to focus on patient care.

INTERGY PACS

Works Thinks Moves
the way you do

WebMD Radiology:
Powering Your Radiology Practice

> The WebMD® Radiology product suite provides a full complement of products designed to improve workflow and diagnostic capabilities for administrative staff and radiologists in the outpatient radiology environment.

With the industry's leading billing solution and best-of-breed PACS, WebMD Radiology delivers focused applications you need to solve challenges today, and the end-to-end solution that can power your practice well into the future.

From patient scheduling and flow tracking to diagnostic and document imaging, from coding and claims processing to integrated voice recognition and efficient report delivery, WebMD Radiology works, thinks, and moves the way you do.

Comprehensive Radiology Solutions

The following WebMD solutions are designed to enable you to effectively manage your radiology practice while delivering optimum care to your patients.

Intergy® RIS

> The radiology solution that's also a practice solution, the Intergy RIS is easy to use and powerful in functionality.

In addition to offering complete practice management functionality, Intergy RIS facilitates management of patients and practice resources – including equipment, technologists, radiologists and exam rooms – throughout the exam process. Information is entered once and can be accessed and updated from any workstation in the system.

For those practices requiring the sharing of information with third party software offerings – legacy PACS, voice recognition systems, and others – the Intergy RIS is equipped with IHE-compliant HL7 support. The HL7 interfaces we provide also allow you to exchange critical information with hospitals or billing services, enabling you to move patient demographics, visit information and charges from one site to another. Secure and compliant, our HL7 interface helps reduce data entry errors and redundancy. Combining WebMD Radiology's years of experience with unrivaled, integrated Intergy billing capabilities, the Intergy RIS brings your practice workflow and administrative tools you need to succeed.

Intergy® PACS

> Through a strategic partnership with Dynamic Imaging of Allendale, New Jersey, WebMD now offers one of the industry's top-ranked PACS solutions to our radiology clients.

In combination with the strong radiology practice management system you currently use – whether that's WebMD Intergy Practice or The Medical Manager® software – Intergy PACS is a robust solution designed to meet all of your administrative and clinical needs.

Intergy PACS sets the standard for imaging workflow and collaboration. With proper authorization and appropriate privileges, all remote users – such as teleradiologists, referring physicians, and radiology colleagues consulted on a case – can enjoy the very same access and functionality as local users, via the web.

Using a secure, encrypted Web protocol, all users, whether local or remote, can access all of a patient's images and reports, which are always available online. PACS users can leverage advanced 3D imaging tools, orthopedic planning templates and more. The benefits of a true Web-based PACS are undeniable, and you'll see dramatic gains in efficiency with a radiology solution from WebMD.

Document Imaging Solutions

> WebMD's imaging solutions combine easy-to-use and completely configurable software with state-of-the-art hardware to manage hard-copy documents and images in digital form.

The unique radiology solution from WebMD facilitates management of virtually any document or image file directly from within your practice management system while maintaining its original format. This helps reduce operating costs, optimizes workflow and increases quality of care.

With these systems, retrieval of critical information becomes far more efficient and reliable. Physicians and other office staff have the ability to access patient charts, images, and administrative files from any workstation with local network access. This includes simultaneous access from multiple locations.

Business Intelligence Reporting

> Regardless of size or specialty, every medical practice's success can be enhanced by timely access to accurate patient, financial and clinical data and the ability to analyze and use that data effectively.

WebMD InfoPOINT, an advanced practice intelligence tool, offers easy-to-use solutions for effective management control. With more than 170 standard reports and ad-hoc information analysis, this system provides a powerful foundation for addressing financial and clinical management challenges today and into the future.

WebMD EDI Services

> To support the industry's growing need to communicate electronically with outside organizations, WebMD Practice Services provides you with electronic access to insurance providers, laboratories, pharmacies and hospitals.

The system enables many electronic connectivity features, including HIPAA-ready claims, claims status checking and eligibility verification.

You also benefit from extensive print and mail services, along with clinical tools such as prescriptions and laboratory tests that can be completed electronically.
