

## CellemetryXG™ powers the Numerex® family of M2M solutions and the solutions of our industry-leading partners and developers.

### Powering M2M Communications

CellemetryXG powers wireless machine-to-machine (M2M) communications for a variety of services that remotely monitor, measure, and track remote assets. A two-way wireless data network that uses standard cellular infrastructure to transport small packets of telemetry messages, CellemetryXG is the ideal communications platform to deliver M2M data dependably and quickly.

Using CellemetryXG, your remote assets can be polled, monitored, and managed from central locations. That machine data is captured and transmitted to the Numerex Operations Center, where it is encrypted and securely delivered to your enterprise for action.

Through Numerex's close relationships with all of the primary, and most of the secondary, cellular carriers, the CellemetryXG near-ubiquitous network is fast, reliable, and cost-effective. CellemetryXG's patented technology has been licensed to strategic service partners and application developers who are providing a broad range of applications and solutions in many areas, including:

- Vending Machines
- Monitored Security Alarms
- Railroad Crossings
- Cable TV Power Supplies
- Water, Waste & Environmental Systems
- Uninterruptible Power Supplies
- Electric Power Lines
- Gas & Oil Pipelines & Tanks
- Container Tracking
- Fleet Vehicle Location & Tracking

### A History of Excellence

With a heritage of network quality, reliability, performance, and capacity, CellemetryXG was originally developed by Bellsouth for use in its own network. Through Numerex's commitment to partnering and innovation, CellemetryXG today is the most expansive, terrestrial-based wireless telemetry data network in the Americas. The network coverage footprint has grown dramatically since its inception, now covering all of North America and much of South America and the Caribbean. In fact, CellemetryXG is the most extensive and proven network of its kind.

The focus on network technology and transactions is not where CellemetryXG ends, however. Numerex believes that M2M success depends on more than the network.

## More than a Network

With Numerex, CellemetryXG is more than a network. We focus on delivering value from one end of the network to the other through our end-to-end approach:

**Certified monitoring and communication devices** are easily installed on your machines or facilities to get you operational quickly.

**High-power connectivity** through our large redundant footprint facilitates communication with your remote assets—whether they are in Maine, Mexico, or anywhere in between.

**Numerex's Carrier-Grade Operations Center** works 24 hours a day to safeguard and manage your data and overall solution performance.

**Experienced industry-leading partners** deliver unequalled coverage, reliability, industry expertise, and support—rapidly and cost-effectively.

## Tangible Business Benefits

**Cost-Effective:** CellemetryXG provides cost-effective M2M wireless communications alternatives for almost all telemetry applications. CellemetryXG doesn't require you to invest significant capital or retool existing systems to begin realizing business benefits.

**Rapid Time to Market:** A proven, flexible solution, CellemetryXG speeds time to market, allowing you and your customers to roll out new products and services quickly.

**Reliable and Secure:** With full redundancy and an expansive footprint, CellemetryXG is the most reliable wireless data network. This assures you of continued coverage and capacity, without costly transmission quality and security problems.

### CellemetryXG Fast Facts

- Partnered with more than 50 carriers
- Transmits more than a million messages a day
- Wireless vending intelligence market leader in Latin America
- The most extensive coverage available across North and South America
- Carrier-Grade Numerex Operations Center: Secure, dependable 24/7 availability, 365 days of the year
- Proven delivery with the best solutions partners in the business
- More than a decade of industry-leading network solutions

Numerex M2M Solutions Powered by CellemetryXG include: VendView™, the vending intelligence solution; Uplink™, the security and facilities monitoring solution; and Mobile Guardian®, the vehicle location and recovery solution.

Numerex's M2M wireless business has focused on technologies that have a proven record of coverage and performance as well as a clear migration path to future offerings. We believe that our proprietary and patent-pending digital and SMS solutions, coupled with current and future digital cellular technologies, will protect our customers' investment and provide Numerex with a vibrant suite of product solutions for the future.
