Numerex and Intramerica Launch Wireless Alarm Monitoring System

Integrated CellemetryXG Solution Delivers Wireless Network Security, Redundancy, and Reliability

Numerex Corp.
Nasdaq: NMRX
Nov 3, 2004
3:45pm

NEW YORK, ISC East, Nov 3, 2004 /PRNewswire-FirstCall via COMTEX/ -- Numerex Corp. (Nasdaq: NMRX), a leader in wireless M2M solutions, and Intramerica Security Technologies (IST), an industry leading security solutions provider for US military and security agencies, industrial, financial, and commercial applications today announced the integration and commercial availability of the CellemetryXG(TM) Network with the 3rd Generation Security System (3GS).

The 3rd Generation Security System, from IST, is based on a patented, high-security, fault-tolerant RINGNET architecture offering greater flexibility than most, if not all, existing security control systems. Capable of integrating and managing security and fire alarm monitoring, access control systems, building management systems, and sending alert messages to pagers, the 3GS control panel replaces many earlier alarm security panels in the EUROPLEX product line.

The integrated FT-S network access module from Numerex, is a component of the CellemetryXG suite of interactive, web-based, wireless, machine-to-machine (M2M) interface solutions, which monitors and controls fixed, mobile and geographically remote systems.

"We have integrated the FT-S module from Numerex into our 3GS Solution in order to provide yet another level of security and deployment options for our 3GS Solution customers," said Gail Hoffman, President of IST. "The wireless communications redundancy delivered by the integrated solution, provides our customers with an extremely high level of network coverage and system reliability."

The CellemetryXG network, one of the largest wireless data networks in the Americas, enables the integrated module. Powering M2M communications for leading global organizations across a broad range of industries, CellemetryXG supports the entire M2M value chain -- from network-certified hardware to complete end-to-end applications.

"We are very pleased that IST has chosen CellemetryXG to provide the wireless communications and infrastructure for the 3GS Solution," said Mike Marett, EVP of Numerex. "We have worked hand in hand with their team to drive a successful implementation and look forward to continuing our joint efforts as we bring new offerings to the market."

Numerex's own robust M2M wireless solutions powered by CellemetryXG include: VendView, the vending intelligence solution; Uplink the dedicated wireless communications solution for security monitoring; and MobileGuardian, the vehicle location and recovery solution.

Delivering nearly one million data messages a day from remote assets, facilities, and equipment, CellemetryXG is the M2M network of choice for industry leading VARs, developers and solution providers.

ABOUT NUMEREX

Numerex Corp. is a communications technology business comprised of operating subsidiaries that utilize existing wireless or cellular, Internet and cable infrastructure thereby enabling network access and information management through the deployment of proprietary software and technology. Numerex facilitates the real-time exchange of information between remote devices, people and business systems. This provides companies the ability to remotely connect, monitor, control and diagnose their field assets. The Company primarily markets and sells products and services in wireless data communications through Cellemetry(R), Uplink(SM), MobileGuardian(R), VendView(TM), and digital multimedia through PowerPlay(TM) and IPContact(TM). These products and services enable customers around the globe to monitor and move information for a variety of applications from home and business security to distance learning. In addition, the Company offers wireline alarm security products and services, as well as telecommunications network operational support systems.
